

SYSTEM FOR INTEGRATION OF MULTI-FUNCTION AND INFORMATION SERVICE AND ELECTRONIC APPARATUS FOR THE SAME

5

ABSTRACT OF THE DISCLOSURE

10 In a system for integration of multi-function and
information service, an electronic apparatus is connected to a
teletelephone line for a user to edit message or instruction to
transmit to the electronic apparatus through the teletelephone line.
The electronic apparatus demodulates/decodes the received signal
15 and then transfers it to its destination for remote control of
intelligent appliance, delivery of message, placement of
e-advertisement and various functions. In an embodiment, TV set
is used as a data output medium for the electronic apparatus to
output the received data in a video and/or audio format. In
20 another embodiment, the electronic apparatus is integrated into a
TV set to provide multi-function and information service in
addition to entertainment function.
